BERRY'S SEED FACTS

BARGAIN CATALOG

FIELD SEED A OUR SPECIALTY A.A. BERRY SEED CO. CLARINDA. IOWA

PURE BRED JRAIN AND

THE WORDD'S BARGEST SEED HOUSE

PROCLAIMING THE HIGHER STANDARD OF PURITY OF FIELD SEED.

AN EPOCH MAKING STEP IN THE SEED BUSINESS.

SETTING THE PACE FOR OTHERS.

The present position as the Worlds Largest Mail Order Seed House has been attained by the A. A. Berry Seed Co., largely because they have been in the van guard of progress. We were among the first to set up a guarantte on seeds which others have been compelled to follow in recent years. Now again on the 25th Anniversary of our institution we establish a new policy of purity in seeds. Our World Brand quality has led the field with its purity of 99½ per cent. It has stood as the height of perfection attainable in field seeds and has always been the kind that would please the most critical buyer of seed.

The demands of the farmers have been for different grades of seeds as many apparently found the cheaper grades to give them excellent results. We have therefore sold three grades besides our World Brand Extra Fancy seed. These other qualities were graded according to the value of the lots. The value of course is judged largely by the purity and germinating quality of the seed. The cheapest grades naturally contain the larger per centage of inert matter and impurities. Our new policy is to establish a standard of purity for our lowest grade and range from that percentage on up to our World Brand, superfine quality and we are glad to announce to you

That 95 per cent Purity is the Lowest of our Field Seeds and the best between 99½ and 100 per cent Pure. Very light grass seeds not included; as the percentage of inert matter may be a trifle lighter. In asfar as freedom from weeds is concerned however they are A No. 1.

The only revision made in this statement is the fact that crop seeds are not to be deducted in making purity analysis. It is well known that Alsike for instance, will frequently contain a sprinkling of Timothy or White Clover. This reduces the value somewhat and our price is reduced accordingly. But supposing that there was four per cent Timothy in it and one half of one percent inert matter. That would make that test only 94½. This Timothy however is not dangerous in any way and is counted as crop seed and is not deductible in the analysis. The main fact that you should bear in mind, the fact which should mean most to you, is the exclusive of weed seeds and all other inert or foreign matter, the extent of 5 per cent or less on our cheapest grades and one half of one per cent on our highest grades.

We want you to understand this article and its purpose thoroly. It is not our purpose to encourage the use of our cheaper grade of seed. On the contrary we want to sell you our best grade of seed. When you buy our World Brand you have the absolute satisfaction of knowing that you can get none better. It pays to get the best. When you buy seeds that fail to grow, you lose the price of the seeds, the cost of your labor and the full use of your land, or, if you get a heavy percentage of weeds you are damaged likewise.

Therefore our recomendation is the World Brand or the best. But we do want you to know that when you buy Berry's seeds regardless what grade it will test from 95 per cent upwards for purity, crop seeds excluded. In case we should acquire any seed below that purity it will be specifically stated.

EVERY BAG WILL BE LABELED

We will attach to every bag a tag showing the exact purity of the seed and if there is any one crop seed present in excess of 5 per cent it will also be stated. It is our purpose to let you know just exactly what you are getting so that you can figure out for yourself the actual saving we can make you on seeds. Figure it out on the basis of quality. You can confirm this test anywhere you please.

It seems that in this good old land of ours when you become a large corporation that there are lots of folks who think it is their duty to throw bricks at you. They will take a truth and so magnify or distort it that the impression of a greater evil is presented to the public. We have experienced a few cases of this but want to proclaim to you Mr. Farmer everywhere that we stand ready this year to serve you to better advantage than ever before. We can save you money and our higher standard of purity as here explained can guide you as to the quality of our seeds.

Remember that all seed must satisfy you when it arrives. You can test it or have it tested. If you are not pleased let us know. We order the seeds back at our expense and refund all money you spent plus transportation charges. What we ask is a chance to show you that we can save you money on high grade seed. We satisfied seventy five thousand customers with high grade seeds last year and each one of them saved money. Can we count you in this year?

Cet our samples. See our prices. Bear in mind our tag on each bag. Compare values. Investigate. Remember our Purity standard.

Quality. See how many will come up to our quality standard.

quanty. See now many win come up to our quanty standard.

Let us prove it. That's the way we sell. Buy at Bed Rock.

Satisfied Customers Are Better Evidence of Big Values Than Any Prejudiced Statements to the Contrary

Batesville, Ark., 8-29, 1919.
Gentlemen: Enclosed find draft for \$21.00 to cover 100 lbs. of "Climax" Alfalfa seed. described on page 22 of your special catalog of Fall bargains. Kindly make immediate shipment of this bag of seed, care of the Mo. Pac. Ry at Kansas City, Mo.

The seeds I received of you in the past year have all made a good stand of Alfalfa and I now hove 40 acres of find meadly. Some of

now have 40 acres of find meadow. Some of the croakers told me that the Nebraska seed the croakers told me that the Nebraska seed would not grow tall and would mat down on the ground. I wrote you of this and you said you were sure it would give me satisfaction. I had already gotten the seed in the ground and then had to wait to see if you were right. We have baled 50 tons off 20 ground and then had to wait to see if you were right. We have baled 50 tons off 20 acres from the first two cuttings and had to dump 6 racks of hay from the first cutting on account of a heavy rain on it. We now have a third cutting from this 20 acre tract that will make 15 tons, this with but very little rain. This hay is in the shed un-baled, but will be 15 or more tons. This gives us an average of over a ton per acre off the tract from the first 3 cuttings. This from seed that would not produce so some said. The 20 acre field is my last year seeding—balance this year seeding, as you know, it does not do much the first year. We will have at least two more good cuttings off the old meadow and we will sure make 100 tons on the season, not counting the loss of part of on the season, not counting the loss of part of on the season, not counting the loss of part of the first cutting. 100 tons of Alfalfa hay baled is valued at \$30.00 to \$35.00 per ton here. \$3000 to \$35.00 per ton tract, second year of meadow is pretty good, don't you think? Next year I look confidently forward to cutting 200 tons from the 40 mentioned above. It is the best paying crop that we have on the farm. 40 mentioned above. It is the best paying crop that we have on the farm.

Thanking you and giving you this ultimate

result, I am

Very truly.

W. D. Gray.

BEST OATS Vienna, Mo., 3-6, 1919. Dear Sir: I seat myself to write you a few lines to let you know that I received the Seed Oats all right and I was well pleased with them for they are the best seed that I ever seen.

Yours truly, L. W. Terwilliger

WELL PLEASED—BACK AGAIN

WELL PLEASED—BACK AVAIN
Pendelton, Ind., 8-8.1919
Messrs.: I sent you an order for little
Red Clover, Timothy and Alfalfa seed last
spring thru W. W. Manifold and was well
pleased with the seeds and would be pleased to have quotations on your seeds Especially, little Red Clover. again. Yours respectfully, Chas. W. Manifold,

SAVED \$10.00 ON 21/2 BUSHEL OF CLOVER

SAVED \$10.00 ON 2½ BUSHEL OF CLOVER Berryville, Va.. 8-21, 1919
Dear Sir: Please send me by return mail your lowest prices on Grass Seed and Farm seeds. I am well pleased with the Clover I bought of you last spring. I saved about \$10.00 on the 2½ bushels of Clover.

Sincerely yours,

Roy M. Good.

JAPANESE MILLET YIELDS HEAVY

Tingley, Iowa, 8-12, 1919
Dear Sir: I bought some very fine Japanese Millet of you this spring and sewed about 12 acres on second sod bottom land and it is very fine all headed out and stands up to my armpits. Now it looks like it would

Gentlemen: Enclosed find draft for \$21.00 to ask what the seed would be worth this to cut it for seed or hay.

Respectfully.

E. N. De Witt.

SHOWING UP FINE
Woodstock, Va., 7-23rd, 1959
Gents: Your seed is showing up fine which
I ordered from you last fall. Respectfully.

Jne. T. Haas.

BACK FOR MORE

Aurora. Ind., 7-13th, 1949
Gentlemen: As Mr. Andy Schamle is so well pleased with your clover seed, he wishes to have 2 bu. of the best Timothy seed so please send to his address a sample of Time othy seed and price list. Also, lawn grass seed as soon as possible and oblige. E. N. Leekes.

LIKES BONANZA MIXTURE FINE

Westphalia, Kans., 7-3, 1919
Dear Sir: Have you any of that Bonanza
Mixture like I got of you last spring? It
was sure good seed as I got a perfect stand. What is the price of it?

Yours very truly,

C. T. Patton.

BEST RESULTS FROM BERRY'S SEEDS Grandon, Wis., 4-17th, 1919

Dear Sirs: I received your last book all O. K. I ordered grass seed from you last year and I have a good stand. All my seed I ordered from your house I got the best results. I recommend all of your seeds as No. 1 to my neighbors.

Yours truly,

Geo. Harrison.

CAN'T DO WITHOUT BERRY'S SEEDS

Dear Sirs: Please send me your catalog.

I have moved from Winston. Mo., here and can't get along without some of Berry's Seeds.

Very truly yours, Elmer G. Stewart.

FINE STAND OF ALSIKE AND TIMOTHY
Gentlemen: The Timothy and Alsike I got
from you is sure fine. I believe every seed
came up. Fine stand and doing fine.

Yours truly,
A. H. Wheicher.

A. H. Wheicher.

SWEET CLOVER O. K. IN TEXAS

Hillsboro, Texas, 2-17. 1919

Gentlemen: I wish to thank you for your seed catalog of 1919 and red price list on field seeds. At present I am especially interested in Alfalfa and White Sweet Clover.

As an experiment I last year bought 30 lbs. of White Sweet Clover and sowed it in winter wheat. We had one of the hottest and dryest springs and summers on record, but my Clover came thru alright. The first shower or two in the fall brought out the plants Clover came thru alright. The first shower or two in the fall brought out the plants spendidily and by the middle of January much of it was from 18 to 24 inches high.

Yours truly,

J. R. Thompson.

NO EXAGGERATION

Ocean Springs, Miss., 5-30. 1919 Dear Sirs: I am giving you a small order. Also, want to tell you that I was very much pleased with the other seeds that I have ordered from you. They are proving to me that your seeds are all that you said they would be.

Yours respectfully Willis Morrison.

BERRY'S SEED FACTS

And Bargain Catalog DECEMBER, 1919

Published monthly during the planting and seeding months by the A. A. BERRY SEED COMPANY CLARINDA, IOWA

JOE FAASSEN-EDITOR Terms-Gratis to all customers and Priends.

THE OLD AND THE NEW

Here we are near the close of another Like all years it has had its ups and downs for all of us. It has brot both happiness and sorrows; hopes and fears; y and anxiety. It has shown us new weaknesses and developed new strength. All of us no doubt have experienced these things more or less. Let us get the full benefit of the year that has passed and apply its lessons to the problems of the future.

We, for ourselves can look back and see where we made mistakes and knowing now we can rectify them we advance on the new year with the hope of aveiding past errors and a determination to make the year 1920 the best of our lives. Let as ever strive to improve. Let the past be the past save for its lessons which may guide our footsteps.

We welcome the year of 1920 as our apportunity to increase the value of our service to you and hope that by co-operative efforts between us we may succeed in being of genuine help.

All hail, the New Year which approach-

WHITHER ARE WE DRIFTING?

The High Cost of Living has the consideration of most of us. That leads us to look to the causes of High Prices. What magazine free as well as our large illus-Ar3 these causes? Men differ in opinions. Trated wholesale catalog. No obligation to buy at all. Will be glad to send it to them. We will be much obliged to you to for we might be able to sell them some them. We will be much obliged to you to for we might be able to sell them some them. too much waste, too much idleness, extrav- seeds later. The average man appreciates agance, speculation, etc. Who knows but a chance to save money. what they are all contributing causes? The value of the money of some foreign countries has greatly depreciated. So es and we are sure that all of you who much so that they cannot buy our com- need the kinds of seed offered on page 16 modities to advantage. This will have a and 17 wil appreciate the extraordinary tendency to increase the supply of goods values listed there. It is difficult to sein this country This will lower prices, cure such seed at these prices and happens On the other hand more work will increase only occasionally when we find some one the supply and will have a tendency to who has to sell quick for cash or under to lower the cost of living. It really some similar circumstances that it is at works down to the economic law of all possible to offer you such bargains. supply and demand. Profiteers there In every instance however, we give you have no doubt been and there may still the advantage of our purchase. Please be but Uncle Sam will get them and bear in mind that these lots are limited we do not believe that their elimination and order at once it you are interested.

would make a great deal of difference in prices if all else remained the same. Politicians make a great ado about them because people like to hear profiteers assailed. Do not let that becloud the real facts of the case. Increased production will mean lower prices, and it takes work to increase production. So that one of the panaceas for the reduction of the cost of living can be set forth in one word "Work." One thing is sure from indications we are on the down grade now. There will be some advances where there is a shortage such as prevails in many seed lines this year but next year we would watch matters very carefully and prepare for lower values. At least that is our opinion at present. Things may change. Crop failures, vast labor troubles, etc., may cut down production and increase prices still more. But let affairs move along as usual and everybody working and you will see materially lower prices next year.

HAVE YOU ANY SUGGESTIONS?

Seed Facts is written for you. Do you like it? Has it helped you in anway? Can you suggest anything that would add to its value for you? Lets hear from you folks. Spend two cents telling us about it. The shortage of seeds causes high pric-

EDITORIALS

ORDER EARLY

We have set this by itself because of the importance of the message. It is important to you rather than to us. There are four vital reasons why it is to your interest to order early.

1ST. YOU GET BETTEP SEED

Invariably the best seed goes out first. Sometimes there is a big supply of seed and you can get good seed anytime. This year there is a shortage in nearly all seeds. The late comers will have to take what they can get or probably will be unable to get any at all.

2ND. YOU GET LOWER PRICES

During the past three years the market on seeds has kept going up as the season for seeding approached. There were but very few exceptions to it. This year it is going to be worse because of the greater scarcity. We predict a strong advance.

3RD. YOU GET BETTER SERVICE

Most people buy their seeds in the wirter, beginning about January First. That means that they all buy about the same time and that causes a flood of orders, a rush of business and congestion and unavoidable delays. Why wait till the last minute and take chances on poorer seed and higher prices, when you can avoid both and get better service by ordering early. Your order gets better attention because we can give it more time.

4TH. YOU GET BETTER DELIVERIES

Order your seed now. In case there should be any delay in transit there will still be plenty of time to get your seed to destination. Seed shipments are given preference over nearly all others but still there may be circumstances that would cause some delay. You run no risk on early shipments. Railroads are not so congested at this time. Your shipments go thru better.

IF AT ALL POSSIBLE—ORDER TODAY

It will profit you nothing to wait. By acting now you are assured of the Best of Seed at the Lowest Prices. You get Better Service and Better Delivery. It is to your interest to send in your order now. You will thank us later for this tip. We are ready now to serve you. It all depends on you now.

Make Out Your Order NOW And Save Money!

HOW TO TELL GOOD RED CLOVER SEED

When a man says he has clover seed to sell, he may be saying a whole lot and then again it may mean very little to the buyer. The main object of the farmer who pays our good money for seed is to get the quality that will enable him to raise a crop of clover. Of course he may have a failure due to several other causes than poor quality seed but it is certain that he is doomed to failure in case he sows seed that will not germinate.

Clover seed is Clover seed but all Clover seed will not grow. It is, therefore, to your interest to judge carefully the quality of the seed that is offered to you.

than to put it in practice but any how a few suggestions may prove helpful. The color is paying for something you are not getting. the rule by which many people judge it. The more purple there is in the seed the finer it and many seedmen, if they carry anything is. This, however, has very little to do with as god as our World Brand, want a very the real value of the seed if we judge value fancy price for it. In fact they have to pay by the results that can be obtained from the their wholesale dealer a fancy price if they seed.

sume that if the berry is large that it will be business on a smaller profit. Our territory count sells better.

The brightness of the seed is another point fit he can get. in judging quality. Bright shiny seed is of good germination. But a lot of dull seed is invariably our quality higher. Our cleaning of just as good germination. Climatic conditions may cause seed to look dull but if the seeds were rubbed with a cloth like is done with apples it would brightly, and that very thing is done. Much the best when it is to be had. Often the seed is run thru a special machine polishes it and brings out the gloss.

Poor germinating seed is always dull nd cannot be polished up brightly. If you see a lot of Clover seed that is very dull and cannot be brightened you will be safe in leav- to serve you on clover seed to your partiing it alone.

of the best. Much of this seed will grow but seeding is here.

some of it will not. The more of this kind of seed you find the less it should sell for. If such seed were priced quite low it would be just as cheap to buy as the best. You would have to sow a little more per acre but on the final cost per acre the results might be just about the same. You can't always judge the percentage of such seed. might be just about the same. Unless you have had years of experience it is liable to fool you. You are safe on the best.

The inert matter and weed seeds also have a big effect on the quality of seed. The best and nicest looking seed contains very little. The seed with a large percentage of grain quite frequently. altho not always. con-It is probably easier to say how to do it tains more impurities. It may not all be weed seed but if it is not clover seed you are

The only thing we ask of you is to and shrunken, too much rain, too much heat buy early for we are confident the best seed or early frost may do this. Such seed is not will be all sold long before the season for

WHY MORE ALSIKE CLOVER IS BEING SOWN

Clover seed is quite high in price yet too cheap to do without. The wonder to us is that Alsike Clover is not higher in price than Red Clover. The difference in price per bushel is not so great but the cost per acre is much less. Alsike could be considerably higher than Red per bushel and still be cheaper per acre for it doesn't take as many pounds per acre to sow a field of Alsike as it does to sow a field of Red.

ADVANTAGES OF ALSIKE OVER RED CLOVER

the seeding cost still more.

in feeding value.

It is easier to get a stand of Alsike because not nearly so sensitive to acid in the soil and will grow on land too wet to grow verted into valuable pastures simply thru the use of Alsike Clover.

It is the hardiest of all Clovers and it is back to you. very seldom indeed that Alsike ever winter kills. If you are troubled with winter kill-Alsike instead.

er but never was the demand as heavy as last mutual advantage to act quick. year. This year we expect a still stronger demand. The lower cost of Alsike is of farmers have not learned of before.

IMPORTANCE OF GOOD SEED

You will find it very much to your inter-It is in the first place a perennial and ests to use Alsike Clover this season. We lasts for a number of years from one seed- want to urge you however to take care in ing. This should be remembered as it reduces buying your seed. Alsike is a very small seed, not much larger than the White Dutch Alsike makes better hay because it is finer Clover seed. There are some weeds that can than Red and pound for pound it is higher scarcely be separated from this seed. Therefore the source of your seed should be good and we always recommend buying the best. it will grow on practically all soils. It is There is none better than our World Brand. It tests better than 99 per cent pure.

All of our seed however is sold subject o other Clovers. We have seen sloughs con- any test you may wish to put it. If you are not satisfied in every way, back it comes at our expense and all money you paid comes

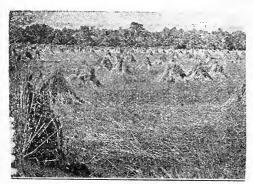

LET US SAVE YOU MONEY

Our purchases of Alsike Clover were made ing you will benfit yourself greatly by using early. We bought first hand and picked up the best we could find. The same seed Alsike makes a better combination with would cost us considerably more money Timothy than Red Clover does because it now. You can cash in on the saving we matures at practically the same time. Both made. Our policy is to turn seed fast at a are perennials and will last for several years. small margin making three small profits in USE OF ALSIKE INCREASING RAPIDLY a season rather than one big one. That saves We have always sold a lot of Alsike Clov- you money and makes us money so its to our

ADVANTAGE OF BUYING NOW.

Price saving is possibly the strongest course partly responsible for this but the reason. Not only is seed advancing but we merits of the Clover as we have shown are expect it to do just about like it did last many. We know that the farmers who year; keep on going up as the season adbought it last year on account of the lower vances. We predicted that last year. Some seeding cost of Alsike, are going to buy it of you bought early, some waited and paid again when in further need of Clover. We for it. You can buy cheaper now and you do not claim it will supplant Red Clover by can get better seed. The best seed always any means, but it has a big value that many goes first. Those who wait must take what is left.

QUALITY IN TIMOTHY SEED TIMOTHY

If you had traveled thru the sectio s producing Timothy seed this year you would The Planet and Star. have been surprised to have seen the vast difference in the seed produced. locality you would have found nice, plump, Brand has been carefully recleaned in our bright heavy seed. A few miles further on Mammoth Cleaners and graders. It is also it might be light and chaffy or again, very high germinating stock but it is not so nice badly hulled and dark in color. Considerable in appearance as our World Brand. It concare had to be exercised by careful con-tains more hulled seed, is not quite so bright eractors in order to secure seed that would and consequently sells for a ran uniformly good.

Our very best buyers covered the chief producing centers of Iowa very thoroly and the very finest of all lots has been made tate our World Brand Quality 99 1/2 per cent pure. Please consider for a moment the quality of the seed you secure when you get the cream of the Iowa grown crop. It is genarally recognized among seedmen that Iowa the greatest Timothy producing state in the U.S. And right, as three-fourths of the 20 w2 crop is produced in the southern part, BOAR Clarinda, the home of this company.

You cannot gain by deto thirteen and a quarter inches long. The laying your order. You simply risk delay, yields on these fields ranged up to ten and higher prices and inferior quality. walsven bushels per acre. It was all beauti- Will you not send it in now? Today?

ful bright seed. You are well aware that like produces like. The mere appearance of the seed will n t tell you that. Of course conditions have their bearing on the production of the crop but one can scarcely expect to produce the maximum results from seed that was not grown from plants that in themselves were examples of heavy growth and the height of production. Timothy grown on poor, weak soil does not obtain the food to fully develop the seeds into all that they might be.

We ask you to bear these facts in mine when you buy Timothy seed. Our seed is carefully selected, and secured from the best fields. That is why our World Brand quality is the leader of all in Timothy Seed.

There are two other grades that we carry.

The Planet Brand is also produced in our In our selected seed sections and it like our World little money.

> The Star Brand is a lower priced grade and is made up chiefly of hulled seed. It contains some seed that tests lighter in weight and a little inert matter. It is quite free from weeds altho some lots contain a little red top. It is seed for the man who feels that a cheaper grade will answer his purpose.

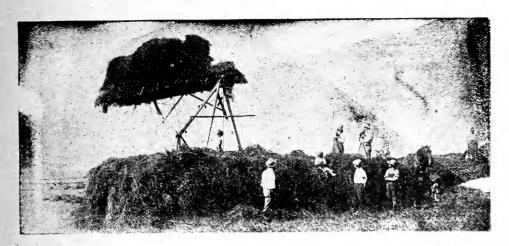

> We want to urge you to use World or Planet grades. They cost a little more money it it true but it is worth several times the difference.

Your seed purchase is an important one. We are thus in a natural position to cover Why take any chances. You are risking than that of other seed houses. This com- tions that may cause you to be unsuccessful You can tell that at a glance if you are no nearly all dealers offer. You will find many

Let us hear from you now. Get the very

GRASSES OF GREAT VALUE

BROMUS INERMIS

This grass is not well enough known to the farmers of this country. If it was it would be more widely sown. Bromus is one of our deepest rooted grasses which gives it the ability of resisting drought in a remarkable manner. The trouble with so many of our grassess, especially when used for hay is that they lie practically dormant in hot dry weather. Bromus like the rest responds well to moisture, but it is not nearly so quickly effected by drought as the shallow rooted Stasses commonly grown in the co n belt.

It is likewise very hardy and seldom winter kills. Bromus is a more valauble feed than Timothy and it is also relished more by stock as it is very palatable. The yields are fine when grown for hay and horses are exceedingly fond of it.

Bromus is a perennial plant and therefore adapted to permanent pastures and meadows. A mixture of orchard grass Alsike and Bromus is excellent in most sections for permanent pastures. Blue Grass and White Clover can be added if desired.

Bromus comes into Bloom around the middle of June. The best hay is obtained by cutting when it begins to bloom. The seed is sown at the rate of 20 lbs. to the acre. The seed bed should be well prepared and the seed harrowed into the ground thoroly. The seeds of Bromus are very large which necessitates a little deeper covering than the average grasses.

Good seed is essential to success and frequently good seed is difficult to obtain. This is true more often late in the season when Bromus Seed user sholud order early.

May we not have your order?

KENTUCKY BLUE GRASS

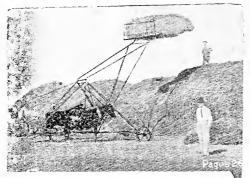

Land is too valuable these days to let :t stand and accumulate a growth of Blue Grass. It may come naturally in your section, but it does not come fast enough. In you have a pasture to establish this year is should contain blue grass right from the start and you can get your quick start from the new crop, recleaned, high germinsting seed we have in stock for you right now Blue grass is the most valuable all purpose grass for pasture in the United States east of the Missouri and from the Carolinas north. It is a grass of exceptional feeding value. We often wonder whether farmers appreciate the feeding value of their Blue Grass paature when we notice the neglected condition of so many of them. Manure your Blue Grass, friends. You wil still further increase its feeding value as well as its growth and you will notice that weeds are not nearly so plentiful on rich pasture land as they are on thin pasture. Don't you realize that pasture takes up fertility as well as other cross. Of course the fact that it serves as a pasture will cause the application of some manure. Give it a god application or apply some phosphoric acid. You'll be well repaid

Don't do without Blue Grass pacture and give your pasture a good start by using bright, solid, live seed. Our crop this season was harvested with special care to securthe highest type of seed and you are practically insured against failue by using such seed. See our price list for wholesale quotations the Fancy stock has all been sold. Every Bags are free. If you need pasture grass our select Blue Grass seed will speed up results.

A PROFITABLE HAY AND PASTURE MIXTURE ALSIKE CLOVER AND TIMOTHY MIXED.

GREATEST HAY AND PASTURE COMBINATION ON THE MARKET.

By experimenting it was found that Alsike and Timothy made a combination that was excellent and ahead of anything yet discovered for hay and pasture. We were the first Seed House to offer this wonderful combination to the public and has given such excellent satisfaction that we do not hesitate in the least to recommend this wonderful mixture to our friends.

There are several reasons why we urge our customers to buy this mixture, but our main reason is, that we are able to give you more for the money by buying Alsike and Timothy mixed than any other seed we seed houses, and thus help to establish a have to offer. We buy this mixture direct from the grower and buy it in large quantities, so you can readily see why we are able to make you as low a price as we are making at this time.

One great advantage that is realized by a mixture of these grasses, is the fact that they are both perennials, and make a better combination that most any two. When you once get them established, they stay right with you, for a good many years or until you wish to break up the sod. Alsike and Timothy is a very hardy variety and does not winter kill easily. Alsike forms a thick bottom and greatly increases the amount of pasture or hay and stock prefer ping, which in most cases amounts to as it to timothy alone. Timothy acts as a much as the freight. protector to the alsike, which is one reason why it does not winter kill.

It has been our policy for the last several years to try out all the different grass mixtures, and we have come to the confar ahead of any other for popularity, fore long. There are several reasons why this is the your order today before it is too late. case. In the first place the seeds of the Alsike and Timothy ripen at the same time. This makes the crop more prefit-

able as a seed crop if you desire to harvest the seed. Then again you will find that both these grasses reach the state of maturity at practically the same time and naturally makes a better hay than can be produced with any other seed. Another great benefit derived by sowing this mixture, is the fact that it is a great soil builder. Alsike supplies the nitrogen to the soil and keeps it in proper condition for the best growth of Timothy. The yield is enormous and of the best quality of hay, having a very high feeding value for stock of all kinds and splendid for horses where pure clover is objectionable

Alsike and Timothy when grown together cannot be separated when threshed for the reason that the seeds are so nearly the same size. For this reason it does not have a standard commercial value and we are able to secure large quantities at a price which enables us to sell it direct to you at a price which is very little above the price which your dealers will ask for Timothy alone. Amount of seed required to sow an acre, varies somewhat, but we find by getting our information from practical farmers all over the country that the average seed sown is from 10 to 15 pounds per acre. We allow 45 lbs. per bushel in order to be in line with other standard weight per bushel. In order to offset this difference we have decided to give to our customers this year a better grade of seed than has been given in the past and we know when you receive a shipment from us this year you will wonder how we can give such values for the money. We believe we have the biggest bargain in grass seed we have ever offered when we furnish you this Alsike and Timothy mixed at the low price quoted. If we were ever in a position to save a customer money, it is this spring on Alsike and Timothy mixed. Remember our prices includes bags furnished free for ship-

Order This Excellent Bargain Early.

We cannot guarantee our price on this seed for a very long time and we urge all our customers to place their orders early ciusion that Alsike and Timothy stands for you are bound to see prices higher be-Take a tip from us. Place

HIGHER QUALITY IN GRASS MIXTURES

We offer you this season higher quality grass mixtures for increased yields of hav than ever heretofore. There is no question whatsoever but that Timothy mixed with 'lover will make a heavier yield per acre than either Timothy or Clover alone. Not lone do you grow a heavier tonnage per acre but the feeding value of it is much higher. The higher protein content of the clover makes it a much richer feed and consequently increases its value. Seeds are all quite high in price this year and we are offering a higher standard. The price therefore, is somewhat higher but the actual value is still higher in proportion so that our grass mixtures this year are more attractive from the buyers standpoint. You will find that quality in seeds pays. It is high quality seed that we want to sell you, for we know that you will then be perfectly satisfied. The results will make you forget the purchase price. However, if you will compare our values on the basis of quality, you will find that you cannot begin to duplicate them anywhere else.

BONANZA GRASS MIXTURE.

RICHER IN CLOVERS

This is a combination for a more or less permanent meadow or pasture purpose. It makes a richer combination than any of our other mixtures as it contains a much heavier proportion and a more varied assortment of basis. This seed constitutes in the neighbor- and satisfy you in every sense of the word Clover and Alfalfa. The Timothy is a perennial as are the Alfalfa and Alsike Clover. The Red and Sweet Clover will last only two years when used for hay purposes. When utilized as a pasture these last two crops Timothy and Clover and Timothy mixed. will usually reseed themselves and keep up There are several advantages to this. The the full percentage of clovers. This makes a two Clovers together make an excellent very rich feed and is a combination that is growth between the Timothy. When grow to rapidly growing in popularity with our cus- for mermanent purposes, the Clover will tomers. This mixtures is usually seeded at die out at the end of the second year which about the same rate as our other mixtures, leaves the Alsike and Timothy. The addiing invites failue. One half inch is ample loose or sandy soils where it can be covered up to 1½ inches.

seeds, it is sold subject to our guarantee. the bushel. See price list for prices.

If the seed does not please you when it arrives let us know. We'll have it returned at our expense and all money plus transportation charges will be promptly refunded.

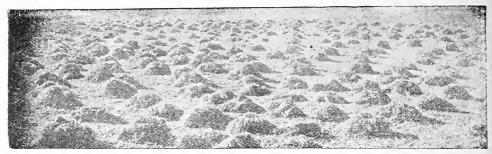

CLOVER AND TIMOTHY.

This is a popular mixture everywhere altho, not as extensively used as our Aliske and Timothy mixed. It combines into a very rich hay crop that produces extremely satisfactory yields. Our customers seem to be very well pleased with this seed and as the quality is superior to our stock of previous years, you certainly can bank on excellent results. The Clover content varies a trifte but contains a liberal percentage that will please you. You must be perfectly satisfied with it when it comes. We want you to e. amine it carefully so that you can be convinced of the attractiveness of this value. We stand ready to take it back and refund you every cent of the purchase price as well as the freight charges if it does not please. You can see that it is up to us to deliver the Clovers. It is made with Timothy seed as a goods that will please you. We will do so hood of one half the mixture. The balance May we have your order now before prices consists of Red Clover. Alsike Clover. INCREASING FARM VALUES

tremendous increase in farm prices during the past year. Some call it a boom and a wast speculation and in many cases it is epoculation pure and simple. The cause is generally given as the large amount of money in the country. Well, there is a lot at it in some places and the fellows holding it started to buy land with it boosting the price until it seemed there was no limit. Others having no money or only enough to get a start took their fling at wasy money, and a lot of them got easy Some of course, bought the land to farm, but mostly it appears to be speculation and in some case wild speculation. Rents have gone up along with it. Can this last? Will there not be a reaction, is the question many men are asking. It seems that there will be if the prices of farm commodities drop as we feel that they will when the inflation of money sub-The only way to avoid it in our opinion is to actually make the land worth more by increasing its productiveness. That is not hard to do if the trouble is saly taken and you will find that you must take the trouble if you own or operate she of these high priced farms. But why wait till the price is high. If you work a comparatively cheap farm why not work It like it was a high priced one and inrease your profits accordingly? In our Bead Facts we have repeatedly brought out the fact that Alfalfa on a farm would saise its value many dollars per acre. This Percase was in no way due to speculation, but based solely on increased productive-The land was actually worth more for Alfalfa increased the fertility. Many have found that the yield of crops followand Alfalfa were often doubled. Now they know that when a farm has a good crop of mean a sure cash return and big profits.

az farm values and yet have no Alfalfa on land.

We have discussions pro and con on the their farms because they are afraid they cannot grow it. Occassionally one can find a farm that will not grow Alfalfa very well. It is usually a very poorly drained piece of land or one that is very sour. The drainage can be corrected by tile which will benefit not only alfalfa but all other crops as well. The acid condition can be corrected by the application of lime in some form. Thousands of farms would be benefitted greatly by the application of lime even though no Alfalfa was to be sown, for lime will release a lot of plant food that lies in the soil but which plants cannot take up. The average farm, however, will grow Alfalfa without either drainage A fairly fertile field on which a or lime. good seed bed has been prepared will grow Alfalfa. The main things to observe are the seed bed and depth of covering the seed. Do not sow it on freshly plowed land or very loose soil. Have your seed bed well settled and do not cover the seed over one-half inch. One-quarter inch is usually sufficient. In sowing with a nurse crop have this crop thin. A heavy nurse crop has a tendency to smother out the Alfalfa. If it does not do that the chances are you will kill the Alfalfa when you cut the nurse crop for grain. You do this cutting at a hot and dry time of the year. The Alfalfa plants have had shade during the cooler spring season and are naturally tender. When you remove the heavy grain crop the tender plants cannot stand the hot summer sun and frequently die. Therefore let your nurse crop be light The Alfalfa plants will then be stronger and you will not remove so much shade.

Use our Nebraska grown Dryland nonirrigated seed. We advise the best, or our World Brand. It is the cheapest seed in Alfalfa and a good acreage that they have the long run. Sow 15 pounds to the acre a farm that can produce good crops which Observe the few suggestions we have made above and you will find that you can grow There are a good many farmers who will Alfalfa with good success and in growing Brearfully admit the influence of Alfalfa Alfalfa you will raise the value of your

OUALITY TALKS IN ALFALFA SEED

WHAT IS THE TRUE VALUE OF ALFALFA SEED?

You can buy a suit of clothes most any We have three other cheaper grades and old place at any old price and have a suit try to make each grade a good value for of clothes. Two suits may look alike and the money, but we do urge the use of the fit about the same yet there can be \$10.00 World Brand as the most economical sees to \$20.00 difference in the price. When to buy. Not because its costs more money, ference and yet an expert can find it out in sults. two minutes.

tell you about seed. He can tell you to the fraction of seed almost what the per cent of purity is. He can identify any imthe exact germination. He would tell you that our World Brand Alfalfa seed was the highest standard offered. But he could not tell you how resistant the crop from that seed would be to winter killing. He could not tell you whether the variety was a heavy yielding one or not or practically anything about those points that are so vital to a crop of Alfalfa.

It is the hardiness and vitality of the stand that you are interested in just as much as the purity and germination of the seed for after all it is the crop you are after.

Since it is impossible to tell anything from the appearance of the seed in regard to the hardiness of the erop how important it is that you secure your seed from re-Habie sources. You buy a particular make ef clothes, because you kn w that manufacturer makes clothes that satisfy. But a weed purchase is more important than rhat of a suit. It involves not only the purchase price of the seed but the use of you buy, must satisfy you. I' you be of your Alfalfa seed.

Brand for it is clean and pure and live, have saved you money.

you go to wearing the clothes you find out (the profit to us is the same) but, bethe difference. One may fade and shrink cause it is worth more money. A lot of and pull out of shape, the other remains our customers praise the cheaper grades about the same. Its hard to tell the dif- of seed and say they have given good re-We are glad to hear it but we figure that a seed purchase is the most im-Buying Alfalfa seed is a good deal the portant one made on the farm. If it isn's same proposition only harder, for there it ought to be and we again urge you to are some things no expert in the world can get the best. our World Brand, none better.

Now the hardiness depends largely en where and under what conditions the seed was grown. For most of our trade exparities there may be and he can find out cepting the far north, we advise Nebraska grown Dry land, non-irrigated seed. H has the vitality that is needed and is worth far more than southern seed or seed produced under irrigation.

> Its easy to get fooled on irrigated sees for it is usually such beautiful appearing seed on account of the ideal conditions under which it is produced, but it has not got the hardiness of the other. For our northern customers we have Montana or Dakota grown seed. This seed is usually worth a dollar per bushel more, which is caused by higher freight and longer hauke to the railroad. We carry only the Worle Brand in the Montana and Dakota grown seed.

The Grimm is a variety that is being used in many sections where Alfalia wibter kills badly. Having a branching rook system it does not have to depend on one tap root.

Bear in mind that every pound of seed your land, the employment of your labor come convinced when you get it that it it and your ultimate profits depend on it, not good value we'll take it back at our It is with these profits that you later buy expense and refund all money you paid your clothes. So look well to the purchase plus transportation charges. Test the seed if you wish or have it tested. We wan: For quality we recommend our World you to be satisfied and convinced that we

ITS USE PROVES ITS WORTH

Have you ever heard two men arguing when a fellow would start to argue with about something, one of them cool and calm and the other scattering profanity with a loud mouth to the four winds? Then you have noticed farther and ob served that the fellow who was cussing was invariably on the wrong side. they were both cussing, chances are they are both wrong. Now we're not going to inflict a sermon on profanity, gracious Under proper provocation we can be made to indulge ourselves in the use of a few selective superlatives. point is that when a fellow is wrong it seems to be natural for him to try to bluff out of it by cussing, hoping thereby to detract from the truths the other man is uttering.

Now we have observed a peculiar thing in going thru the country. Ye Editor had great faith in Sweet Clover and likes to question farmers in regard to the crop and urge them to grow it. The average farmer will listen to reason and facts and is willing to try. But you meet all sorts of folks and of course every so often your path is bound to cross with one of those stubborn "critters" that were born to argufie and are created by the heavens for the special purpose of giving advice on all problems confronting human beings here below. You know the kind. Well its funny to talk to them about Sweet Clover. His father considered it a weed, most of his neighbors considered it a weed, excepting a couple of fools down the line who tried out every new thing and therefore was a no count, pestife ous weed. He would usually start out peacefully enuf but by the time you put a few facts up to him it kind of seemed like pitching a monkey wrench in the machinery causing his beautiful line of reasoning to snap like a thread substituting a volcano of hot air highly seasoned with profanity and the word liar,

Now one case wouldn't be so bad, but every time, so far as we can recollect, times

us against Sweet Clover he would get all tangled up and start cussing.

Well folks, the more of that cussing I heard, the more faith I had in Sweet Clo-It was once considered a weed but its value is now well known and any man who will investigate and base his judgement on facts will agree that it has a great value and that it is needed on 80 per cent of the farms of this country.

Sweet Clover is a soil builder second to It grows only two years but in none. that time it developes tremendous roots that go down deep in the soil, bringing up plant food from its depths for other crops to use later. If properly inoculated, it will store a great wealth of nitrogen in the soil. It produces an abundance of feed that is equal to Alfalfa in feeding value. It surpasses Alfalfa as a pasture plant for it does not bloat stock. It will carry more stock to the acre than any other pasture and you will find that stock to be in ideal condition. It fits into rotation better than Alfalfa. It will inoculate soil for Alfalfa. Stock will readily acquire a taste for it and once they have it they will prefer it to almost anything else you can offer them.

Plow under Sweet Clover and these big roots will decay quickly, leaving an abundance of humus, a ketter richer soil and greater wealth to you who took the once despised weed and made it work for you.

There are millions and millions of acres in this fair land of ours that can absolutely be reclaimed by Sweet Clover. If your soil needs increased fertility, if you can use rich pasture and all other things we have mentioned above, go and use Sweet

Don't cuss it. You can't damage Sweet Clover that way. Use it. Grow it. Let it increase your wealth. We have seen it done dozens of times, yes hundreds of

The Values of the Different Sweet Clovers

There are three varieties of Sweet Clover that are commonly offered in a commercial way. They are the White Blossom Biennial, the Yellow Blossom Biennial and the Annual Yellow Blossom. The soil requirements of these are the same. They will grow almost anywhere and on any soil except acid land. It is not advisible to grow it on land that is sour. When you sow it see to it that your seed bed is firm and well settled. It does not do well on loose land unless there is plenty of moisture. It will grow on hills and valleys. On dry land and land that is quite moist. It is a clover that can be made the salvation of many soils. Simply sow on a firm seed bed at the rate of 15 pounds of scarified seed per acre. Cover the seed very lightly. You can seed it like Red Clover. Early seeding is advisible.

WHITE BLOSSOM BIENNIAL

This is by far the most commonly sown of the three. It makes a larger growth than either of the yellow varieties. It is superior to both of them as a soil builder. It developes an amazing root system in two years time. They are great powerful roots that will break up a hard sub-soil and allow heat and moisture to penetrate. Thus it transforms unproductive areas into veritable gold mines of productiveness. Heavy soils become warm and mellow and sandy lands increase their moisture holding capacity thru the wonderful soil building properties of Sweet Clover.

It makes most excellent pasture. Stock can easily be accustomed to it and once they like it, they will prefer it to other feed. That may be contrary to the opinion some of you have but it is the fact of the matter. Thousands of farmers have had that same experience and can back up this statement. It will carry more stock per acre than any other crop and keep it in the pink of condition. Neither does it bloat stock like Alfalfa or other clovers. White Blossom Sweet Clover makes a good hay if cut early before it gets woody. It is equal to Alfalfa in feeding value.

This Sweet Clover has rather a hard seed coat which sometimes retards germination. You should therefore, insist on scarified seed. This process slightly scratches the hard coat and permits the entrance of moisture which is necessary for germination. It takes less seed per acre and gives quicker and much better returns. You are assured of getting good scarified seed from us and we ask you

to bear that in mind in making your comparison of prices. You will find our values unapproachable. We handle close to forty car loads of Sweet Clover seed each year. We secure the seed direct. Save on freight and expense of handling. We are undisputed leaders in the sweet clover business and can serve you to excellent advantage.

YELLOW BLOSSOM BIENNIAL

This variety grows two years like the white blossom and ranks second in popularity with the farmers. It really has some vital points of superiority over the white blossom when it comes to hay production. While it does not grow quite as large as the white, neither does it grow as coarse. For that reason it makes a finer stemmed hay and is a little easier to cure.

This variety matures from ten days to two weeks before the White Plossom which recommends it for use in some sections. Like the white, it makes an excellent pasture and is also, a great drought resister. The remarkable ability of the Sweet Clover to keep on growing in hot dry weather is a point you should not over look. Sweet Cloxer pasture or hay will solve the feed proposition for many a farmer in a hot and dry season. It requires about as much moisture to get started as other clovers do, but when it once has a start it will out distance them all. In some sections the white and yellow are grown together with good success. The difference in maturity is not much of a drawback as it is better to cut the white blossom a little early than late when it would become woody.

YELLOW ANNUAL.

This is the smallest of the three and is not recommended for hay. It is good as a pasture plant either alone or in mixtures and is utilized to a large extent in this manner. While it does not grow as tall as the other, it bears seed in a prolific manner and the seed crop has considerable value. All the varieties produce big seed crops that pay out big returns. There is big money in raising Sweet Clover seed.

The Annual Yellow, of course, grows only one year. It is not as good a soil builder as either of the others, the white being the best for that. As a pasture plant however, the yellow annual will please you.

We have tried to make it clear to you in this issue that it will be to your advantage to buy your seed early regardless of where you may decide to purchase. The scarcity of many seeds plus the heavy demand is bound to force prices higher. It is to your interest to buy now while good seed can be obtained. It is to our interest to help you save money and we offer this additional incentive to those, if there are any, who cannot see the gain to be made by early Juying. This special offer of Sweet Clover. Seed is a value that will appeal to every one interested in this wonderful crop. It consists of Yellow Biennial and Yellow Annual Swett Clover. Clover.

YELLOW BIENNIAL VERY POPULAR

For hay purposes this variety i better than the white as it does not grow as coarse as the white and makes finer hay. In many sections the yellow biennial is now sown exclusively. It makes heavy growths of heavy feed. It is surpassed by Alfalfa only as a hay crop and in many places is on par with Alfalfa as it is just as high in feeding value and has the advantage as a pasture in that it does not bloat stock. It grows quickly if two weeks earlier than the White Blossom. It cures easier because it is finer stemmed and for the same reason produces a better hay. It is a soil fuilder and a money maker. It cuts down feed bills and builds an profits. up profits.

ANNUAL YELLOW BLOSSOM

This is a smaller growing variety but it makes its full growth in one year and then dies. For this reason it is not well adapted for hay nurposes. It makes an excellent pasture the year it is sown and by sowing the mixture of Biennial and annual, you should have a dense mat of pasture, the first year and excellent crops of hay the second year from the Biennial alone. The growth of the annual is some years is really surprising. Especially, when there is sufficient moisture, in such years it will produce a good hay crop but ordinarily, we recommend it for pasture purposes. By combining the two as we have done in this special offer, we have a value that should appeal to you as a good substantial money making crop. The cost of seeding is certainly low considering the special quick selling price that we have made on this. we have made on this.

LOT HOMESTEAD PRINCIPALLY BIENNIAL YELLOW

The seed is principally the Yellow Biennial variety and will produce a crop of great value. The seed is all new crop of high germination and thoroughly recleaned. It is to be shipped with the privilege of your examination and test. We'll cieaned. It is to be shipped with the privilege of your examination and test. AN EXCELLENT QUICK HAY CROP.

two require entirely different weather con- many peas become cracked by the a bean should not be planted until the ground the variety used and the purpose for which is thoroly warm. Field Peas do best when the crop is grown. sown early for they require rather a cool small grain crop if grown fo hay.

Fiber and Fat in 100 lbs. of dry matter.

Portein	Crude Fiber	Fat
Field Peas19.05	28.14	3.23
Alfalfa 16.35	26.74	3.00

You can see that it analyses higher than Alfalfa Hay does. We do not recommend Field Peas to replace Alfalfa, far from it. But for the farmer who wants a quick Hay Crop of good feeding value we recommend Field Peas and Oats sown early in the spring.

It has other values that should also be borne in mind. It is a legume and will store nitrogen in the soil thus building it up for following crops. It is also an excellent crop to plow under for green manure. It fits in for hay or plowed under early in the season rotation very nicely as it can either be cut and give ample time to prepare a fine seed bed for Alfalfa or Fall Wheat.

Field Peas as a rule do best on fall plowed land. If the soil can be worked early in the spring it will give good results but the seed bed should not be too loose. The seed bed heavy soils to 4 inches on sandy soils. Drill- nothing. It may lose you money.

Field Peas are often confused with Cow ing gives the best stand altho one should Peas. The latter are really beans and the watch from time to time to see that not too ditions for good results. The Cow Peas being The amount per acre varies somewhat as to

YOU MAY BE NEEDING THESE GRASSES

VALUABLE GRASSES FOR HAY AND PASTURE

The letters we receive from day to day indicate that many farmers are interested in learning the merits and character of various grasses for hay and pasture. purposes so they may know what is best for their soil or purpose. It may be that yes save a problem of this kind confronting you and you may therefore be interested in the following brief description. Some grasses are described elsewhere but we beifeve yeu will want to know more about the four mentioned below.

RED TOP

Most of you are acquainted with this grass and kn w that it is one of the finest grasses we have for wet land. It is palatable and nourishing and very prolific on wet land. It forms a very compact sod. Not only is it adapted to wet land but also to thin and acid soil where it will do better than almost any other grass. It is a good grass to sow on creek banks to check washing away of the soil.

It is a perennial and will last for years from one seeding. It is usually sown at the rate of 10 lbs. to the acre in the spring. A good seed bed is advisable altho many start the grass by merely sowing broadcast on the land.

Red Top is a fine combination with Alsike Clever for wet land. Our stock this year is of excellent quality.

ORCHARD GRASS

This is a perennial plant that is quite deep roeted. Once established it will last for years. Has an excellent food value. Orchard Grass is adapted to almost all kind of soils. Does well on wet land and makes a good combination with red top. It also is good on sandy and dry soils and is especially recommended for this purpose by the agricultural department of Missouri. It will grow better in the shade than other tame grasses and is fine for wood land pasture. It starts early in the spring and grows well thruout hot weather. It does not form a sed but grows bunches and therefore is not so good for a hay meadow as for pasture except where sown in a combination with other sed making grasses. Orchard Grass matures about the same time Red Clover does and is a good mixture with it. Orchard Grass gets its best start on a well prepared seed bed altho in some cases broadcasting and harrowing is used with good success. The rate of seeding is 20 to 25 lbs. per acre.

vear

MEADOW FESCUE

This is a perennial grass that will grow to a height of three to four feet. The leaves are quite large and the plant is very nourishing and palatable. It is more tender than orchard grass and seldom winter kills. It makes an excellent pasture as it forms a good sod and being a fine soft grass of high feeding value you will find its adaptability for pasture most excellent. It is a grass that is fine to use in a pasture mixture. It matures about the middle of July when allowed to stand for hav. Being of quite long life it is not advisable to put it in a place where it is to be only for a year or two, but where you want it for permanent purposes for three years or more we can recommend it to you highly It is not a grass for light or sandy soil, but for average soil, for heavy wet land it is excellent. Being good for wet land it is frequently used with Red Top and Alsike Clever. The seed is quite high this year but our stock is A. No. 1. Sow 15 to 20 lbs. per acre. when sown alone.

ENGLISH OR PERENNIAL RYE **GRASS**

This is one of the first cultivated grasses and very extensively grown in Europe today Its value is not sufficiently appreciated. It is essentially a pasture grass and grows quickly. For quick returns it is excellent It is grown both north and south. Attains a height of one to three feet. In establishing a pasture we strongly advise the addition of some English Rye Grass. It will give you a quick growth while the slower growing grasses will have a good opportunity to develop. This grass will stan tramping and close cropping. Will also grow quite well in shady spots. Clay Loam soils are considered Orchard Grass does weil in the South, best but it will do very well en all corn land North, East and West. Learn to know this The rate of seeding when sown alone is about grass and you will value it highly. Insist 40 lbs. to the acre. Ten to Twenty peunds on high germinating stock. We have excel- are sown when in mixtures. If you expect to lent values in Orchard Grass for you this start a pasture this season do not fail to include some English Rye Grass.

THE MOST WONDERFUL GRASS OF THIS AGE

SHOWING TWO SINGLE PLANTS OF SUDAN

It may seem rather early to urge you to buy Sudan Grass seed now for the crop cannot be sown until the ground is thoroly warm. which is at corn planting time or just after. However, our experience with this seed during the past three years has clearly indicated the wisdom of buying early. Each year the popularity of this crop is increasing wonderfully on account of its merit and during the past few years the seed was exhausted before all demands were filled. Naturally as the supply of seed begins to run low the price of the seed begins to go up. Not only that but the quality is poorer, the best going first. So you profit by getting better seed at a lower price by purchasing early.

THE VALUE OF THIS CROP

Some of you perhaps are not fully acquainted with its value. You can never appreclain fully until you have grown it. we wish to bring out.

QUICK CROP

Sudan is primarily a crop for the man who needs quick hay and pasture. While it cannot be successfully sown until corn planting started. It will be in bloom within about seed now. See price list for prices.

seventy-five days after planting. Generally he cont gered an ideal time to cut the hay the plant on long before this as the plant may reach a height of six feet before beginmig to bloom. You can see therefore how quickly it grows. The second cutting reaches and other cuttings a about the same time. It is no necessary to wait that long as it can be cut for hay sooner and naturally is quickly available for pasture.

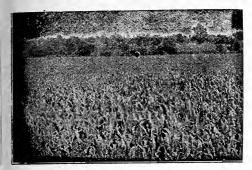

HEAVY YIELDS

Combine its quick growing qualities with ields ranging no to 15,000 pounds of hay per cre and as his a a x nun pounds per acre ader irrigation of a se what a fromen-It is of great value ous: value the crop ha n territories having light rain fall although do w not ps to grow it where the rain all as less than five inches per year. Any mount over that a can be grown rofitably. in not well adapted to the north western at of the United States as the seasons are so cool. Every where else it is a heavy elding crop that is rapidly being incororated in the farming throughout the United tates. It means a great deal when feed is nort to have a heavy yielding crop and to ave a crop that will keep on growing when is too hot and dry for other feed to grow. Sudan is that kind of a crop.

SEEDING REQUIREMENTS.

A warm soil is necessary. Therefore spring plowing is advisable. It helps warm the soil. Rea' heavy soils are frequently cold and enerfore not adapted to Sudan. Any good corn land is good land for Sudan. One inch a good covering for the seed. It can go deeper on sandy land, down to three inches. If you want to raise it properly for seed sow i in rows 18 inches or three feet apart. This takes three to six pounds of seed per acre. It you want it principally for hay sow broad cast at about twenty-five pounds to the acre or use twenty to the acre with a grain drill. Many are using Cowpeas and Soy beans in with Sudan. This facilitates cultivation of both crops and also increases the feeding value. Sudan alone is equal or a little superior to Timothy hay. We will take up the matter of handling the crop in the later issues of "SEED FACTS." We wish at The are several points about the crop that this time to show you the value of this crop. To prepare you for the use of it next year and what is probably more important just now is to have you put your order in now. Of course we would like to lave your order but we feel sure that wherever you buy you time it is a "ge-get-er" when it does get can save money by supplying yourself with

A GRASS OF INCREASING POPULARITY BILLION DOLLAR GRASS.

Like Sudan Grass this is an annual hay Sudan belongs to the and pasture plant. cane family and Billion Dollar Grass to the Millet family. Both produce heavy yields. Billion Dollar Grass is especially adapted to soils containing an abundance of moisture. This does not mean that the crop is only for moist lands for it will give satisfactory yields in all soils containing sufficient humus or organic matter. It is not however a great drought resister like Sudan and is not recommended for use on sandy lands.

VALUE OF THE CROP.

It analysis higher in protein than either the Golden or Hungarian Millet and produces heavier yields. At the Ohio experiment station it almost doubled the yield of the Hungarian. The growth of course depends on the richness of the soil and weather conditions. It makes growth up to five and six feet high and hay yields run up to five and eight tons of cured hay per acre. It makes an excellent soiling crop producing up to 25000 to 4000 pounds of green feed per acre. The value of the crop must be clear to anyone needing an abundance of feed in a short season.

INCREASING POPULARITY

The demand for seed of any particular crop is usually an indication of the favor it has found with farmers. The increase in the past few years has been tremendous. The last two years we have run out early. This is especially significant in the case of Billion Dollar Grass as it is a heavy producer of well here if this soil is not heavy or cold. your order now. TODAY? In sections subject to drought, Sudan would See price list for wholesale quotations.

be better than Billion Dollar Grass. The ever increasing demand for this seed proves its great worth to farmers and you will find in Billion Dollar Grass a crop that will give you plenty of valuable hay quick.

SEEDING

This grass should not be sown until the ground is warm. Spring ploughed land is preferable and the seed bed should be well prepared. The rate of seeding is about 20 lbs. to the acre. The seed should not be covered very deeply. One half inch is sufficient on average soil. The value of the hay can be improved by seeding with a mixture of legumes such as cow peas or soy beans. From one half to a bushel of either can be sown to good advantage. This will raise the yield as a rule and will also greatly increase the feeding value.

CUTTING

About the best time to cut is when it begins to bloom but before it forms seeds. It is not considered extra good for horses after the seed forms. It can be cut before bloom and early cutting might enable you to secure an extra cutting. Experiments dicate that the plant has its highest food value at the time it begins to bloom. seed purposes it should be allowed to stand till the seed attains the hard dough stage and is then handled like any millet seed.

OTHER USES

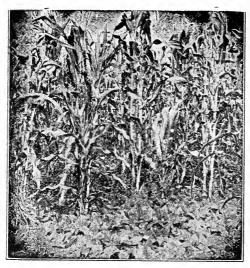

Billion Dollar Grass makes a quick heavy growth and is well adapted for pasture. It is advisable in pasturing to accustom the stock to it gradually as with clovers. This grass is also utilized to a limited extent for silage. In such case we recommend the mixture with either soy beans or cow peas. The crop has so many excellent points of value that can only be appreciated by actual growing and handling of the crop that we want to urge you to try it. Even if only an acre or two. We feel confident that you will then want to sow it every year. Especially when you need a quick crop.

GET YOUR SEED NOW

Its early we know and in so far as we are seed. The seed crop also adds to the profit concerned would just as soon sell it to you of growing this grass. The interest of most later. You will probably pay more money farmers for a quick growing crop seems to for it then and chances are that the stock center around Billion Dollar Grass and Sudan will not be as nice as we have now. The Grass. We are often asked which to advise. present supply is extra select, recleaned and It depends largely on soil and weather con- of high germination. We feel that you will ditions and the price of the seed also has a appreciate our service in a large measure to bearing on it. Sudan would also do later on. For that reason may we not have

\$\$\$ FATTEN YOUR BANK ACCOUNT \$\$\$

Its very simple folks. All you have to do is to cut the cost of raising them, and that isn't hard either when you observe the way some men go about producing hoge for the market. If you are not satisfied with your profit on hogs, grow some rape next season. The seed doesn't cost much. Six to eight pounds will sow an acre. We have some new high testing seed that will give excellent results. We want to bring to your attention some facts on the feeding value of Rape and the most satisfactory methods of seeding.

RAPE ABOUT EQUAL TO ALFALFA

This statement is based not only on analy-is but on actual feeding experiments made at the Iowa Experimental Station: One rows. This is a good method as the hog group of pigs was separated on Alfalfa and, walk in the rows and are less wasteful in Rape pasture, otherwise were fed the same. their feeding. Rows can be from two to thre having self feeders and given free choice of feet apart. It is also a good plan to dividshelled corn, meat, tankage and rock salt. It took one more day on Rape pasture to equal the gain on Alfalfa pasture but it took more tankage for the Alfalfa pasture. One hundred pounds of gain on Alfalfa pasture tock 342.7 pounds of corn against 342.5 pounds on Rape pasture. Tankage with Alfalfa pasture 31.7 pounds. Rape pasture 22.4 pounds. That means that it cost 50c less per hundred to produce pork on Rape pasture than it did on Alfalfa.

A further fact brot out in the experiment was that they could pasture more hogs per acre on rape than Alfalfa. Not use a few but from two to three times as many.

YIELDS UP TO 40 TONS PER ACRE

Think of 40 tons of green feed per acre of Rape produced under favorable conditions. Consider further the astounding fact that this crop analysis from 20 per cent to 37 per cent protein in dry matter. That is the

reason it required less tankage to fatte the hogs. Now do not think that the reduc tion of 50c per hundred is the only savin you can make, that is merely the saving ove Alfalfa. How many of you who read th book have Alfalfa for hog pasture? We ven ture that the percentage is small and tha very few of you have a pasture for hogs tha runs high in protein contents. You buy you tankage for protein. It is a food element yo must have in abundance to fatten hogs quick ly. Why not grow it in the form of Rape Those of you who do not have this form o pasture wil find that Rape will reduce you grain ration tremendously.

SOIL REQUIREMENT

Rape is adapted to many soils but ther should be a plentiful supply of moisture an a fairly good supply of humus for best re sults. The crop is ready to pasture from si to eight weeks after seeding so that it can he sown from early spring until quite late to the summer. Many sow with oats in th spring. We would prefer first sowing oat and the rape a little later after the oats ar up. Sow six to eight pounds per acre. Man; broadcast the seed alone. Others sow is your rape field so the stock can pasture on while the other is getting a new growth.

RAPE FINE FOR OTHER STOCK

It is just as ood for sheep as for hogs and all young stock thrive on Rape pasture. J seems to taint the milk so milch should be pastured on it lightly. There is a little danger of bloat to sheep and cattle and care should be taken not to let then pasture when wet with rain or dew and i would be best to pasture lightly at first.

We have tried to show you briefly the great value of this crop which lies in its high feeding value and its abilty to fatten and cut down the grain feed thus increasing your profits. The cost of the seed is not high and we can not see why you would not make liberal use of Rape this coming season. I means dollars in your Pocket. Use only the Dwarf Essex Rape. Our stock is extra selec and guaranteed to please.

A VALUABLE SPRING GRAIN

The merit of Spring Rye will be better appreciated this season than heretofore. The hay and forage problem is troubling many farmers. If you are facing a shortage of food for your stock you will find Spring Rye a crop that will fill your needs. It is valuable for pasturage, hay and grain season.

Does Well on Poor Soils.

We do not mean that it grows only on poor soils, for it will make better yields on fertile soil, but it will pay better on poor soils than any other similiar crop you can grow. It is far more profitable than wheat or oats or barley on such soils. It does not require as much plant food and will not run down the soil as quickly as these other crops. It does well on both acid and non-acid soils.

.. Great Drought Resister.

We want to recommend Spring Rye especially to those who are troubled with lack of moisture. The crop will flourish better than a similar crop under unfavorable dry weather. On soils that are light and sandy it gives good results. It is a crop that produces satisfactory results under adverse conditions and these characteristics alonc compells us to recognize its exceptional value.

Value As a Grain Crop.

The straw of Spring Rye does not grow as large as that of Winter Rye, but the grain yield is very good. The quality of the grain is excellent and almost identical in appearance to Winter Rye. It is an excellent feed and a profitable grain crop to harvest. It can be used to thicken a thin stand of Winter Rye if it is not desired for seed purposes.

Wonderful Hog Pasture When Ripe.

A great many farmers allow the grain to ripen and let it stand about two weeks after it is ripe in order to soften the beards.

Hogs relish such pasturage and it is an ecomomical way of fattening them. It also eliminates the cost of threshing and can be recommended if the grain is not needed for other purposes. It also makes excellent pasturage for hogs in the early spring after attaining a growth of three or four inches.

Four Tons Hay Per Acre.

Spring Rye is the earliest Annual forage crop and makes good hay or green forage. The best time to cut for hay is when the heads begin to appear. Many cut it with a binder for hay purposes as it is easily cured in this manner. The yields vary of course with season and soil conditions but yields of over four tons to the acre have been frequently secured. Two or three tons are ordinary.

Pasture After Hay.

After the crop has been cut for hay it will make additional growth and furnish excellent pasturage, if the season is not too dry. As stated before, Spring Rye is a very early crop and if desired can be plowed under after the hay is cut and a crop of millet put in.

Good Soil Improved.

A crop of Spring Rye plowed under enriches the soil and adds humus. If the grain or pasturage is not needed, you will find Spring Rye an economical crop to grow for this purpose.

When to Sow.

Spring Rye does best when sown early. It is similar to ouner sprin, grains in this respect and if possible should be sown as soon as the frost is out the ground. It is quite hardy and will withstand light frosts. When sown for grain purposes, one and one-half bushel to the acre is good seeding. For pasture or forage purposes one-half to one bushel more to the acre are required.

Use Pure Seed Stock.

We are fortunate in being able to offer to you one of the nicest lots of Spring Rye Stock that could be obtained. The quakty of the stock is fine but the quantity limited and we want to urge you to place your order promptly to be sure of getting some of this stock. See price list for prices.

We are sure many of you are needing a crop just such as our Spring Rye. It will give early pasture, hay and forage and remember that it can be sown in the spring and a grain crop harvested the same season.

Grow Spring Rye—Use good seed stock

TWO VERY PROFITABLE CROPS

CHAMPION BEARDLESS BARLEY.

A PROFITABLE GRAIN TO GROW AND A PLESANT CROP TO HANDLE.

There are many varieties of this Barley, some have long sharp beards, some are beardless, some hull-less and others both beardless and hull-less. Some varieties have two rows of grain, others six. The variety we wish to interest you in is a beardless—

six row barley

We have offered and still offer for sale all the different types excepting the two-row. So strongly has the demand turned to our Champion Beardless Barley that there is no question but that farmers are finding it the most profitable kind to grow. There can be no stronger recommendation for anything than the unqualified endorsement of the users. No endorsement can be voiced for the stronger than the unqualified to the stronger than the unqualified endorsement of the users. ers. No endorsement can be voiced more eloquently or convincingly than in a tremedous increase in demand. Such a flood of orders came for our Champion Beardless Barley last season that we could not supply the

HEAVY YIELDER

The yields of this variety is one point that probably has much to do with its rapidly increasing popularity. Harvests of 40 to 50 bushels per acre are quite frequently reported. The feeding value in this amount means very big returns per acre. Fifty bushels of barley is a lot of rich food that is high in protein contents. You cannot understand what this means until you have fed this excellent grain to your cattle and hogs and young stock. After that you will wonder how you ever got along without it. As a money maker you will find our Champion Beardless Barley a winner.

PLEASANT TO HANDLE AND VALUABLE STRAW

Being beardless this barley can be handled at threshing time with much less labor than the long bearded varieties. Help can handle it faster and cost of threshing is considerably less. Furthermore the straw can be utilized for feed which is impossible with the bearded. This means an additional value of the crop that cannot be secured from the bearded types.

MAKES FINE HAY
Many farmers are loud in their praise of
barley hay. It makes a very rich feed. For
this purpose it is usually cut in the milk
stage. Our Champion Beardless makes the
finest barley hay obtainable. The fredom
from beards makes it much to be desired over other types.

STIFF STRAWED AND EARLY

Our Champion Beardless is about the earl-Our Champion Beardless is about the earliest barley grown. It withstands early frosts successfully and you can sow it real early. It also matures quickly. We have had our Champion Beardless in the stock by the 4th of July. The straw of this barley stands up in a remarkable manner even on very rich ground which is another point that is pushing its nonularity. ing its popularity.

ing its popularity.

CHAMPION BEARDLESS A MONEY MAKER
You will find the profits on this barley
very attractive and satisfactory. Profit is
your aim on the farm. The higher land
values go the more you must produce to
make it pay and it is decidedly to your interest to watch for crops that will increase
your returns per acre. For your own personal gain we urge you to sow our Improved
Champion Beardless barley. There is no
question in our minds but that you will
greatly increase your acreage of barley after you find what a profit you can make by

using this seed.

SEED STOCK EXTRA FINE

This year we have taken extra care in addition to our usual precaution to secure for our customers the very best seed possible. We have had it grown under conditions that tend to deviop the most prolific strains. The seed has been thoroughly restrains. The seed has been thoroughly re-cleaned at siree from disease. The grains are bright and plump. It is just the kind of seed you must have in order to reap the biggest possible narvest.

SPELTZ.

This is a rich grain that is especially adapted to sections that experience considerable dry weather. As a drought resister it surpasses any other grain that we know of. The berry of the Speltz is very similar to that of Wheat, only the hulls adhere to it giving the grain somewhat the appearance of barley only they are broader. You will find an illustration of the grain in our regular catalog.

gular catalog.

EARLY MATURING

Speltz is a very early spring grain. It should be sown just as early in the spring as possible for the best yields. Its earliness is a great point in favor of the grain and enables it to resist the insect enemies and diseases that frequently attack small grain. The plant is naturally hardy and we have not heard of it ever being attacked by these enemies. Its early maturity combined with its drought resisting qualities makes it a grain of exceptional value to farmers.

GOOD YIELDER

Speltz gives very satisfactory yields compared with other grains especially in dry season or in sections that are inclined to drought. It has a stiff straw and we have never known it to lodge. The grain being rich in protein is a very valuable feed. It is good for all kinds of stock and hogs are extremely fond of it. It never the season of its strawn to the very variable ford of it.

good for all kinds of stock and hogs are extremely fond of it. It puts on flesh very rapidly.

NOT A NEW GRAIN

Speltz has been grown for centuries past in Europe, being chiefly utilized as food for human consumption. It can be manufactured into a good flour altho we do not expect to see it used for that purpose in this country. Its great value to the American Farmer is as a stock food and for this purpose we urge its seeding. pose we urge its seeding.

SEEDING

As mentioned before the grain is very hardy. Ordinary spring frosts will not hurt it. The usual rate is 1½ to 2 bushels per acre. Sow it early on almost any kind of soil. Gives heavy yields on rich soil and a most satisfactory grain for thin land. Cut when it is past the middle milk stage and handle like other grain.

DEMAND GOOD SEED.

Our stock is extra fine Northern grown seed. The very best obtainable, thoroly recleaned and selected for seed purposes. Bright Plump stock that is a pleasure to handle and assure the maximum yield. Our stock of Speltz has never been sufficient to meet the demand. We increase it each year but the demand is always a lap or two ahead of us.

It is a crop for early seeding. May we have your order now while we can furnish this selected Seed Stock? It is to your interest to order early. If you have never grown Speltz try it this year. Even if only a few bushels. Those of you who know the value of Speltz can be assured of a quality of seed that will please your most critical

A SPOTTED CALF AND SEED OATS A STORY WITH A MORAL

Samuel Smith was after buying himself a near identical as possible. Now Samuel ficalf to raise so he would have a cow to milk. gured that these pure bred oats sught to in-Now Samuel hadn't decided whether to buy just a calf or a pure bred Holstein. He wanted the latter but most everybody who had them for sale wanted so much money for them that Sam was afraid it woudn't pay. However he looked around and finally found a man who wasn't playing a hold up game looked as the his own seed produced only and had the kind of a calf Sam wanted. Of half a stand. In reality his old oats precourse he had to pay a little more than if he duced a good stand but in comparison with had bought just a calf, but Samuel thought he was on the right track.

By and by that calf developed into a cow and Sam started to get returns on his investment. He had some other cows by this time and had a good chance to compare returns. He had expected a difference in favor of his epotted calf, but even Sam was amazed at the difference. His one cow produced as much milk as his other three cows combined. The results proved Sam's extra investiment for a good calf exceedingly profitable.

Now this same Sam Smith owned a farm and it was a pretty good one too. When he started he sowed some Oats that he secured from a neighbor and they were pretty fair Oats and Sam reaped a fair harvest. But his experience with his calf had started him thinking. If he could get such a big increase in returns from a pure bred calf, why would not the same hold true in oats or wheat or any other crop for that matter. At least it was worth a trial thought Sam, so he set about looking for pure bred heavy yielding oats. T'was just about the same story as his aunt for the calf. Some fellows wanted to sell him ordinary cats for pure bred and others wanted extremely fancy prices for their pure bred stock. Sam finally found what he wanted at the Worlds Largest Mail Order Seed house located here in Clarinda, where all of you folks will eventually buy your seed.

These oats were put in with the usual care and Sam put in some of his old stock too, have our prompt and careful attention. Buy just to see the uifference. They went in early while the best can be obtained. There side by side so that conditions would be .s is no better time than right now.

crease his yield about 10 or maybe even 15 bushels per acre. Those Oats surprised him just about as much as his calf did. Right from the start he could see the difference in his field. When the crop was half grown, it the heavy pure bred stock it looked poor. The harvest brought the bigger surprise. Instead of an increase of 10 or 15 bushels, be secured 43 bushels per acre more from his pure bred heavy yielding stock. That experience converted Sam pretty thoroughly to high quality seeds. Any way why shouldn't it? It cost him less than \$2.50 per acre more for his pure bred seed than his own oats were worth. Look what he got by spending that extra \$2.50. Forty three bushels of oats for \$2.50. No difference in the 1 nd or climate. The seed was rest nsible for it.

These days with land values soaring cannot afford to sow common stock. If you'll follow Sam's experiment you'll find that the extra investment is the most paying thing possible. Here's the way to figure it. No matter what you may sow or plant, if you use your own stock it is worth a certain price, usually the market quotation. figure how much more per acre you will have to pay for our improved stock. will find that the difference is not large and when you reap the increased harvest you will agree that you can not afford not to use our improved seed stock.

High priced land must produce increased wealth or farming will not pay. You owe it to yourself to use only the best. Buy it direct from us and cash in on the saving we can make you and furthermore you are sure

Your orders whether large or small will

BERRY'S NEW GREAT NORTHERN OATS

A NEW HEAVY YIELDING VARIETY

This is the first time we have offered this magnificent super-oats to our trade. Our stock is not as yet large enough to offer in The head is spreading and large as it must an extensive way and for that reason did necessarily be in a big grained oat. not list it in our regul r catalog. But we stooling properities are very have a few hundred bushels more than we able. In our observation we have noted will need for our acreage contract and offer eighty four stalks from a single grain. It this surplus to our customers. This gives sounds almost impessible and yet that fact those who will order promptly an opportun- makes this oat more than ever a marvelous ity to get started with a truly marvelous super-oat. It is a medium oat in so far as nat that should bring a heavy premium for maturity is concerned. Neither very early seed in every section where it is grown.

BERRY'S GREAT NORTHERN A HEAVY WHITE OAT

would have almost twice as much hull on that. them as one big kernel. While the weight would be the same the feeding value of the small oat is less because of the greater p. centage of hull and of course the smaller per centage of meat. Therefore in producing our Great Northern Oat we have aimed especially at a big fat meaty kernel. It is white in color and together with its plumpness it is an oat that will bring the highest market price and usually a premium. Our stock has weighed out 50 lbs, to the measured bushel.

Our chief aim has been to combine yield and quality to a maximum that would create an oat second to none on the market and we is properly called "Great Northern" as the season will be snapped up quickly. original stock was procured from extra ordinary plants in a field of our Regenerated Swedish Select Oats on one of Mr. Berry's will eclipse the old variety as soon as the seed be supplied. If you get Berry's developed this oat it has far surpassed all with the seed. other types.

PLANT DESCRIPTION

The straw is stiff and does not easily lodge, or very late. It is according to our teste the heaviest yielding of all opring oats.

SEED STOCK CAREFULLY GROWN

The conditions under which we have grown We cannot recommend this oat to those these Oats have been the very best. Special who want a small or very early oat. It is a care was taken in selecting clean fields and big, plump meaty oat. The value of a big diseases of all kinds were carefully guarded oat for feeding purposes is scarcely suffi- against. Berry's Great Northern Oat has ciently appreciated. One big special can easily been developed entirely with the view of weigh twice as much as a small variety of giving our customers something better than oat. It would therefore take two kernels to they had ever had before. When you see the equal one big one. But these two kernels seed we know you will agree that it is just

SEED NORTHERN GROWN

GUARANTEED TO SATISFY

All of the seed we have to offer of our Greant Northern variety is northern grown and raised under conditions ideal for developing the best seed. We do not have a great deal to sell this year but every pound that we have is guaranteed to please you in every respect. If you have any doubts as to the desirability of the seed when you get it. simply let us know. We'll take it back and TREMENDOUS YIELDS MOST IMPORTANT refund every penny you paid. There will be no expense to you.

WE WANT TO SCATTER THIS SEED

We want to establish it over a wide area :6 feel that our object has been fully attained make its worth known. We feel sure that in our Great Northern Oat. This stock has you will dispose of your first crop for geed been grown for us in the north and has pro- to your neighbors next year at a big preduced up to one hundred and forty four mium. But even at that we are confident bushels per acre. How many of you who that the demand will be greater than the read this have raised such a crep of oats. It supply and that all our seed stock next

ORDER IT TODAY.

TAKE A SLAP AT THE H C L

Most people like a good garden and everbody should during these times of H. C. of L. Vegetarians are increasing every year as the people find that vegetables are the best and healthiest of foods. At any rate a good garden is one of the essential things and makes a big difference in the expense account. People should pay more attention to their garden with good palatable vegetables of all sorts that you can grow.

A great deal depends upon the seed you put in the ground. Without good seed you cannot expect good returns and of course you must have the ground in good condition to get the results but the seed must be right and of the best variety.

It is our aim to supply you with the kind of seed that will produce vegetables of the quality and flavor you desire. We want to send out seeds that makes people write us, "By using your seed I had the best garden in the neighborhood." We have hundreds of these letters in our files. We use every possible care to get seed that will run true to name and select only stock of high germination. The price list enclosed gives prices on bulk garden seed. It is the most economical way to buy seed if you can use as much as a quarter pound. Probably you can buy with your neighbors and divide the seed.

Our regular catalogue will be mailed to you a little later on. giving prices on packets. However, early buying will have advantages for you this year and we have prepared some special collections on which we have made a big reduction. If you appreciate a money saving opportunity just make up your order for garden or flower seeds and send for our \$1.00 collection which contains 37 large packets of good useful vegetables such as 3 packets of beans, 2 of beets, 3 of sweet corn, 2 of cucumber, 2 of cabbage. 2 of lettuce, 2 of onion, 2 of peas, 1 of carrots, 3 of radishes, 2 of squash, 2 of muskmelon, 3 of watermelon, 1 of nasturtium, 1 of pumpkin. 1 of salsify, 1 of spinach, 2 of tomatoes, 1 of turnip, 1 of sweet peas, of new choice fresh seed tested and guaranteed. Remember 37 large packets plain packets full of seed—not highly lithographed packets with a small amount of seed.

Remember in buying this collection single from the catalog you would pay

\$2.00 but we put these packets up and put them in neat pasteboard boxes to mail for \$1.00.

Now if this collection is too large, you can send for the 95c collection for 50c which has a nice variety of vegetable seed for a small family. Positively no change in either list allowed.

For the lover of flowers we have made up a list of choice flowers which will be a beautifier to anyone's home.

Here is the \$1.10 flower collection for 50c—large packet of Sweet Alyssm, Nasturtium, Poppies, Giant Dahlia, Yucca, Zinnia, Petunias Mixed, Asters Comet, Balsam, Berry's Prize Hollyhock, Marigold, Sweet Peas, Mignonette Dianthus Albus, and Pansies Mixed, and with each flower collection we will send free, Resurrection Plant. This is a novelty, a curious plant to interest all. It looks like a ball of dried moss but when placed in a bowl of tepid water, it opens rapidly to a beautiful fern like plant. One sent postpaid for 10c. If this collection is larger than needed, you may send for our 65c flower collection for 35c and any of the above collections sent postpaid anywhere in the U.S.

On another page we have described in some detail a few varieties of vegetables that require an early seeding. Each one of these is the best in its line. The stock selected is A. No. 1, grade. The prices are made attractive but the point we desire to emphasize is the high quality, the delicious flavor, the earliness and the productiveness of the vegetables it will produce.

We wish we could take you all thru our garden seed department. You could then see with your own eyes how carefully the seed was stored and the particular manner in which it is handled from the time it comes into our warehouse until it goes out in a strong, securely wrapped package to you. You would appreciate all the more the genuine service we are striving to render to you in our garden seed department. Whether for a small back plot or for a big market garden, we feel we can serve you to an advantage. May we not ask you to order early? We can give your order more careful attention and as a rule the quality of the seed is much higher. There is nearly always a saving in price. It is to your interest to order early. Do it TODAY.

A FEW LEADING VARIETIES OF VEGETABLES.

It is our purpose to have a good garden seed department rather than a large We want to handle the most select varieties of garden seeds and take great one. care in getting the seed true to name and insist upon high germination. We know it is a little early for most of you to be buying garden seed, but here are some winners, leaders of the garden, extra selected stock. You will like these. You will find the flavor most appetizing and the yields surprising. This stock has been selected for our early trade. A special value to promote early buying. Let us have your order for these fine garden seeds, today. Order promptly while the supply lasts.

LARGE RED WETHERFIELD ONION.

We prize the large red weatherfield onion as one of our best yielders, the most popular of the red varieties.

A fine large flat red onion. Can you imagine how nice they are, mild and sweet? They are just what you are looking for whether you grow them in your garden or raise them for market. Onions of this type are very profitable and a few rows in the graden planted with our red weatherfield seed will furnish you with green onions throughout he summer and what you have left store up for winter. Their food values are very high and their healthfulness are without question.

Now the most of people don't realize the profit in raising our red weatherfield onion seed into nice large onions for market. Four or five pounds will plant an acre which will produce hundreds of bushels if properly cultivated which readily converts into money faster than any crop raised on the same amount of ground.

Now we have a large supply of this excellent variety to offer you at the following special prices, 1 pkt 5c, oz. 30c, wholesale prices on large amounts. Don't miss this great money maker.

BERRY'S EARLY WONDER TOMATO.

This variety of tomato has been our leader in the tomato seed sales for many years. Our customers are enthusiastic in their praise for this delicious early heavy vielding tomato.

The early fruit is in great demand both by the truckers and home gardeners. It maearly varieties, and no other vegetable excepting the potato which may be considertable, play so important a part in the farmers bill of fare as does the tomato. No other regetable is so often found in the are far -hort of what they should be.

corn.

Now in the home garden the average yield is about 15 pounds to the plant so you can readily see that tomatoes are an ess ntial and profitable vegetable to grow. everyone growing vegetables want them early as possible so we have selected the Berry's Early Wonder and Making you a special price of, on packet 15c, Oz. 50c, 1/4 lb. \$1.75.

PREMIUM GEM PEAS.

Peas are a delicious early vegetable that require early seeding. There are many varieties and we carry all the leading ones for our customers. We want to call your attention especially to a particularly fine variety, the Premium Gem.

Here is a pea which we think everyone growing a garden should try, being an extra fine type, growing a vine of extra strength and hardiness about 12 inches high, that does not require any staking, producing a pod which contains 6 to 9 plump peas. It is a great favorite among the market gardeners.

The premium gem pea should be tried by home gardeners just to find out what splendid quality this pra is.

Buy any way a quart and plant at intervals of two weeks and you will have nice fresh peas for several weeks. We are quoting these at 1 packet 10c, 1/2 pint 20c, 1 pint 35c, 1 quart 65c, postpaid.

EARLY WINNINGSTADT CABBAGES.

Our early Winningstadt Cabbage is grown under the care of practical, painstaking and reliable men: in localities where experience and thorough tests have proved the climate tures several days before any of the so called and soil to be the best adapted to its production. We test this seed carefully to have its quality of the highest standard. Now this ed as a field crop instead of a graden vege- is fine stock and we take pride in making it a leader aside from all the rest of the cabbage varieties.

Now this cabage is an old and famous farmers garden nor is there another so uni- type tried and true in every sense of the versally purchased and the returns in yield word. It makes a large fine conical head, very hard with a small amount of leaves, Fifty omato plants well cultivated will just the cabbage for you to raise for all uses. produce in dollars and cents average gross Its keeping qualities are fine, both for winreturns equal to those realized from one ter and summer uses. Now we want everyhalf acre of wheat. With the same care and one of our customers to give this wonderful attention that is given corn. tomatoes will cabbage a trial. Our special offer on this cabprodumnirteen times the gross returns of bage is 1 pkt 10c, 1/2 oz. 30, 1 oz. 50c. Give it a trial.

INOCULATION

inoculation. by it. what know Legume crops are, you are going to ask "What are Legume crops?" The crops are nitrogen gathering crops like Clover, Sweet Vetch. Cow Peas, Soy Beans, Field etc. Roughly speaking plants are those which their seeds in There are about 6500 in this family of The size varplants. ies from verg small plants to large trees, including the Mahogany and Locust trees.

Legume plants have the power of gathering free nitrogen from the air, and depositing it in the soil.

Legume crops are not hard to grow, as nearly everyone knows Clover has been grown and is being grown 'n nearly every section of the country. The growth of alfalfa has steadily been increasing and is now being grown in practically every State. These nitrogen gathering crops cannot, however, be grown in soil that bears acid, as the basteria which form the nodules on the roots of the plants for drawing nitrogen cannot live in acid infected soil. The test for acidity is very simple. Pack a little of the wet dirt around a piece of blue litmus paper. This paper can be procured from any arag store. Let the dirt remain around the paper for some little time and upon removing, if there is acid in the soil, the paper will have turned red. The redder the paper, the more acid in the soil. This can be corrected by the use of ground limestone.

To produce these nodules on the plants, a certain bacteria must be supplied. There are two ways of supplying this bacteria. is hard work and tedious, the other is quick The first method is to transfer and easy. soil that has been inoculated with Legume crops to the field that you are desirous of This however entails the danger slanting. of transplanting weed roots and seeds. The other and easier way is to obtain pure culture for your inoculation. The great ad- 5 vantage of this method is the small amount 1 of work required for you to inoculate your 2

The question has offield as the culture is put up in sealed botten arisen as to what tles of a half acre, one acre, five acre and crops are benefitted by ten acre sizes and all you have to do is addincellation. Legume sufficient water to the inoculation or Nodule-crops are the only ones Germ as we call it to moisten your seed and that can be benefitted when it dries you can sow it and your work by it. If you do not is done, which brings up the question.

DOES IT PAY TO USE IT?

This inoculation is not, in a direct way, a fertilizer, and it will not help the germination of the seed. The difference between using it and not using it is a big healthy, rapid growing crop on one hand and a pale sickly stand on the other hand that well eventually die out.

There is no way of telling whether or not Legume your land is in need of inoculation unless you have grown the same legume crops on that land. If you have not, you can not afford to take the chance that you will have to without inoculation. If it turns out that the land is not supplied with the proper bacteria, your stand will prove a practical failure. Even though the seed germinates properly the plants will be sickly and die. This means a loss of the use of the land and the waste of seed and the labor taken to plant it; to say nothing of the loss of hay and the gain your soil would have had in the fertility that a successful stand would have given.

Every one can insure proper inoculation. Our Superior Nodule-Germ is pure culture of the bacteria found in the roots of properly inoculated plants and taken only from the strongest nodules of plants that are in the most healthy conditions.

1st. It insures you a better stand.

2nd. It increases your production, not only on the first crop, but on every succeeding crop.

3rd. It provides the Nodules on the root so your Legume crop becomes a fertilizer instead of a robber of the soil, as some Legume crops are when they have not been properly inoculated.

If you want to improve the conditions of your land and grow bigger and better crops, use the Nodule-Germ method. Our Nodule-Germ is the leading culture on the market, fully guaranteed and costs one-half less. Put up in bottles ready for use, well packed and we guarantee safe arrival. Easy to apply, full directions on each package. Seed for twenty-five acres can be inoculated in fifteen minutes. Our prices are as follows. Inoculation for enough seed to sow:

1/2	acre	\$.60
1	acre	\$1,00
5 :	acres	\$4.00
10	acres	\$7.50
20	acres	\$14.00
